

Welcome to the Radar group of homeopathic programs. The current version of Radar represents the latest evolution of over 20 years development. Compatible with every version of Windows from 98 to Windows Vista (Radar 10.5 only), Radar is widely acknowledged as the fastest and easiest to use program available for homoeopaths. **With great free technical support, free teleconference training** and easily accessible help using the program, there is a Radar program to suit every pocket, and aspiration, all of which are upgradeable to higher levels. This means you don't have to start again from scratch when you want to add on to your Radar, and as they all use the same user interface, you don't have to relearn anything either.

Programmed in Belgium and represented by local dealers around the world,

Radar is by far the best selling program in Germany, the birthplace of homeopathy, and outsells all other programs worldwide.

You can add any of these features to any Radar Package, or build your own package
